

# Existing Street Cross Sections

13th Street Traffic Calming Study  
5/22/18

# Crash History

From 2011-2016 there were 52 crashes recorded on 13th St., 32 occurring at intersections.

Crash clusters can be seen at:

- Fort St. & 13<sup>th</sup>
- 13<sup>th</sup> between Ressegui and Ada
- Eastman & 13<sup>th</sup>
- North of Brumback & 13<sup>th</sup>
- Heron & 13<sup>th</sup>

The most common types of crashes in the corridor are:

- Struck objects (mostly parked cars)
- Angle crashes at intersections and driveways
- Bicycle crashes

The most common causes of crashes in the corridor are:

- Failure to yield to pedestrians
- Failure to yield to bicycles
- Failure to yield to other vehicles
- Inattention
- Failure to obey stop signs

| Crash Type  | Injury    | Property Damage | Total     | Alcohol Impaired |
|---|-----------|-----------------|-----------|------------------|
| ● Struck Object   | 2         | 17              | 19        | 3                |
| ● Angle   | 3         | 10              | 13        | 0                |
| ● Bicycle/Pedestrian  | 9         | 0               | 9         | 0                |
| ● Rear-End  | 2         | 2               | 4         | 0                |
| ● Head-On Turning   | 0         | 4               | 4         | 0                |
| ● Angle Turning   | 0         | 2               | 2         | 0                |
| ● Side Swipe Same   | 0         | 1               | 1         | 0                |
| ● Injury crashes are represented by symbol with black dot in center |           |                 |           |                  |
| <b>TOTAL</b>  | <b>16</b> | <b>36</b>       | <b>52</b> | <b>3</b>         |
