Eagle Road & Willow Creek Road
Connection Location to be Determined in Future Alignment Study

Public Comments
Multiple concepts of how a future Willow Creek connection should look have created the need for a more detailed evaluation of the potential alignment, potential realignment, or a new roadway connection.

Status
ACHD and the City of Eagle have determined that this issue needs to be postponed and identified separate from this study effort.

Further Information
The current study will analyze a constrained and unconstrained alternative alignment of Willow Creek Road to determine traffic demand and usage based on the network alternatives.

A more detailed, continued analysis will help to clearly identify the appropriate alignment for an alternative connection location.
